FINE FIBERS FROM WINDOW MODES CREATE A LUXURIOUS NEW LOOK

Window Modes, Ltd., the design industry's premier source for innovative window treatments, introduces **Windowsheer**, a luxurious new collection utilizing abaca, raffia, bamboo, buntal and piña.

Featured in the photo is **Buntal** which is utilized for the base material. **Buntal** is a very fine white bamboo-like fiber. Its thin cylindrical filament is taken from the leaf-stalk of the African Raffia or Buri palm. Woven **Buntal** creates a two directional fabric with an aesthetic, refined appearance. It can be incorporated with other fibers such as knotted raffia for limitless design and textual variations.

The natural **Buntal** fibers are extracted manually by pulling the individual fibers from the buri stalk. The distinctive fibers can be harvested from either the stalk or the leaf- but not both. The highest quality buntal can be almost four feet in length.

Available in natural colors, **Buntal** is a beautiful new alternative for shades and sliding panels.

Window Modes, Ltd. is headquartered in the D&D Building, 979 Third Avenue, New York City and is represented in major showrooms in design centers across the country.
